Deadline for manuscript
submissions:

31 December 2020

Message from the Guest Editor

Recently, the progress has been impressive in the synthesis of various 0D, 1D, and 2D nanostructures based on dielectric, semiconductor, and metallic materials, as well as based on their composites, including metamaterials. Such nanostructures are successfully used in electronics, photonics, sensing, biology, and medicine. Also of interest are carbon nanostructures (based on graphene or carbon dots), plasmon nanostructures, and the use of perovskites as key materials in nanostructures. The rapid development of technology for creating new nanostructures requires the research community to comprehensively analyze their electronic and optical properties. This analysis will provide a deeper understanding of the physics of low-dimensional systems and will broaden the scope of nanostructure applications.

This Special Issue will highlight the latest advances in the study of electronic and optical properties of various types of nanostructures. We invite researchers to submit their original research articles, letters, and reviews on fundamental and applied studies of nanostructures.

Message from the Editor-in-Chief

Nanoscience and nanotechnology are exciting fields of research and development, with wide applications to electronic, optical, and magnetic devices, biology, medicine, energy, and defense. At the heart of these fields are the synthesis, characterization, modeling, and applications of new materials with lower nanometer-scale dimensions, which we call “nanomaterials”. These materials can exhibit unusual mesoscopic properties and include nanoparticles, coatings and thin films, metal-organic frameworks, membranes, nano-alloys, quantum dots, self-assemblies, 2D materials such as graphene, and nanotubes. Our journal, *Nanomaterials*, has the goal of publishing the highest quality papers on all aspects of nanomaterial science to an interdisciplinary scientific audience. All of our articles are published with rigorous refereeing and open access.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed by the Science Citation Index Expanded (Web of Science), Scopus, Chemical Abstracts, Inspec and Polymer Library. Citations available in PubMed, full-text archived in PubMed Central.

CiteScore (2018 Scopus data): **4.21**, which equals rank 66/439 (Q1) in 'General Materials Science' and rank 29/272 (Q1) in 'General Chemical Engineering'.
